** Utility Shelf Installation **

**** PLEASE READ THOROUGHLY PRIOR TO USE FOR IMPORTANT SAFETY INFORMATION ****

Please ensure that you have the following items packaged with your mounting bracket.

- 2 Shelf brackets (one LH, one RH)
- 1 Shelf
- 4 #10 nut/bolt
- 4 5/16" bolts/washers
- 4 5/16" square nut

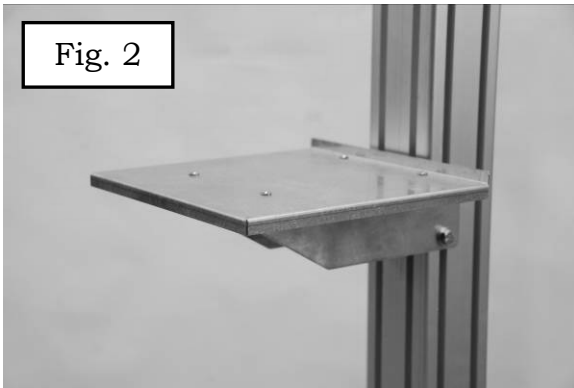

Assembly:

Assembly is quite simple. Assemble the shelf brackets onto the shelf as shown in fig 1. Note that the flanges of the shelf brackets face to the outside of the shelf.

Install the 5/16" bolts and thread the square nuts onto the plate as shown. Be sure to use the washers provided. It is helpful to only thread the square nuts a turn or two onto the bolts to make insertion into the t-slot on the stand easier. It is also helpful to assemble all of the hardware only finger tight at first to make installation and alignment easier on the stand.

Slide the shelf assembly onto the mast of the stand as shown in Fig 2 and position to the desired location. Use a small level to level the shelf and tighten the 5/16 mounting bolts snugly (20 ft-lb or 27 N-m) using a torque wrench. Caution: excessive tightening may permanently deform the mast! Then tighten the #10 screws on the shelf.

Warning:

Do NOT exceed 50 lb (23 KG) of weight on this shelf. If you need higher capacity you should use the shelf tier which can support up to 150lb. This shelf is intended for mounting and holding small equipment only!
